GOAT MILK AND BREED DEVELOPMENT PROJECT AT VILLAGE MALPUR, TAL: SINDKHEDA, DIST: DHULE

Annasaheb Shinde played a pivotal role in the Food Security System as well as the Agricultural Revolution of India.

The foundation is executing a Goat Breed Development project and setting up a Goat Milk Marketing system for uplifting the economic condition and quality of the life of the Goat Breeders.

.

I. PROJECT IN BRIEF

The Project located in Malpur, Dhule is about the benefits derived from the genetic improvements in the breed. The Zalawadi Goat is an established breed in this existing Agro Climatic zone since last 150 years. Yet no efforts have been taken to make improvements in the breed, hence people do not get the required benefits out of the goat rearing. It's very much essential to upgrade the goat scientifically, genetically for making the improvements profitable to the poor farmers. And that's the aim of the Foundation.

The goat milking establishment has to be supported with the following program simultaneously

1. Health Program.: Disease Control, Vaccination and Rearing Practices etc.
2. Feed Program: Silage, Nutritious Food, Calcium, Water etc.
3. Genetic Improvement Program: Artificial Insemination, Embryo Transfer, IVF cloning etc.

II. OBJECTIVES OF THE PROJECT

- Doubling the present income of the goat rearers and shepherds.
- Promoting their lifestyle from nomadic to stabilized, thus enhancing their quality of life.
- Improving quality of milk for consumers & making them habituated for goat milk.
- Goat Milk Enhancement & quality awareness program.
- Bringing awareness for nutritious feed program in Local goat rearers.
- Maintaining goat pedigree and scientific data of goats
- Providing support and guidance to the farmers in marketing of Goat milk.
- Support system for goat health to avoid mortality.
- Bringing awareness for disease free goats through timely vaccination
- Artificial Insemination and Embryo Transfer in Goats.

III. METHODOLOGY.

1. Area of Operation of the Project:
   We have selected thirteen villages in the radius / periphery of 30kms from Malpur. Nine villages from Dhule District and Four villages from Nandurbar District

2. On Field Workers:
   We have recruited the diploma holders from the local Animal Science Colleges as Live Stock Supervisors from the respective areas we have selected in order to coordinate with the Goat Rearers. These LSS provide us all the necessary Milking Data from time to time

3. Local Milk collectors:
   We have convinced the local milk collectors and local money lenders to assist us in convincing the Goat Rearers

4. Tagging:
   With the help of the Animal Husbandry department of Maharashtra Government we are tagging all Zalawadi Goats from our area of operation. With the help of the digital tagging, we are collecting and compiling detailed Milking Data of each Goat.

5. Milking Data:
   We are collecting and will soon obtain a complete data of health, medication, lactation, fodder Milking Data and even habits of each and every tagged goat in our area of operation

6. Use of Milking Data:
   The above Milking Data will be our base for improving the quality of the Goats as well as the Goat Rearers

7. Training to Farmers.
   We will be Providing the farmers a formal complete training of the modern methods of goat rearing, like how to improvise the quality of health, hygiene, Milking Data and fodder of their Goats.

8. Training to Staff:
   We are training our staff how to collect, compile and scrutinize the Milking Data, how to handle the goats and Goat Rearers and how to improvise the productivity of the Goats

9. Role of Government Institutes:
   We are training the goat rearers to use modern and scientific methods to upgrade the productivity and health of the goats and at the same time a proper training is being given to the staff members the scientific way of collection, compilation, scrutinize and preserve a complete Milking Data of the goats. This Milking Data collection is done twice a day of all the flocks and is stored in scientific chart format on computer. This method is followed with the active support and guidance of Central as well as State Government Research Institutions like ICAR, MAFSU as well as Department of Animal Husbandry.

10. Semen Collection and Doses:
    With the help of BAIF we will select 10 healthy and generically proven male goats for collection of Semen and preparing Semen doses for artificial Insemination. This will be an independent project and will need specific funding.

11. Laboratory:
    One more important aspect of this project is a well-designed and well-defined laboratory. This lab will work more precisely for the genetic improvements that we intend to do. It will work from some of the regular issues such as checking the pH level of milk collected upto Embryo transfer. The fund required for setting up this laboratory is pretty handsome as it will need all sort of modern laboratorial as well as surgical instruments and apparatus.

IV. TARGATED ACHIEVEMENTS:

1. IN THE FIRST YEAR:

a. Collection and digitalization of the phenotype and daily milking data of six thousand goats each one separately.
b. Making Goat rearers aware regarding the health, hygiene, vaccination, medication, Fodder Milking Data and all other related conditions of the Goats
c. Training our staff and field workers, the value of regular interaction with the Goat rearers and to achieve the betterment of the Goats through Health, hygiene, Milking Data, vaccination, medication, fodder and Artificial Insemination etc.

2. IN THE SECOND YEAR:

a. The no. of goats for collection of Milking Data will be doubled that is increased upto twelve thousand goats.
b. The Milking Data will be monitored and scrutinized from time to time assuring the selection of the performing goats who in future can be improved genetically and will be available for collection of phenotype data as per our requirement in future.
c. Selection and Elimination of the goats after a proper observation and study & still maintain a number of twelve thousand at a constant level.
d. These maintained performing goats will be our source of the genetic transformations in goat in future like embryo transfer, cloning, preservation of semen sampling etc.

3. IN THE THIRD YEAR:

a. We would preserve and monitor the Milking Data of maintained performing goats who will have genetical performing abilities.
b. Training the staff for Embro Transfer, Artificial Insemination, cloning etc. and start working on genetic betterment of the goats registered with us.

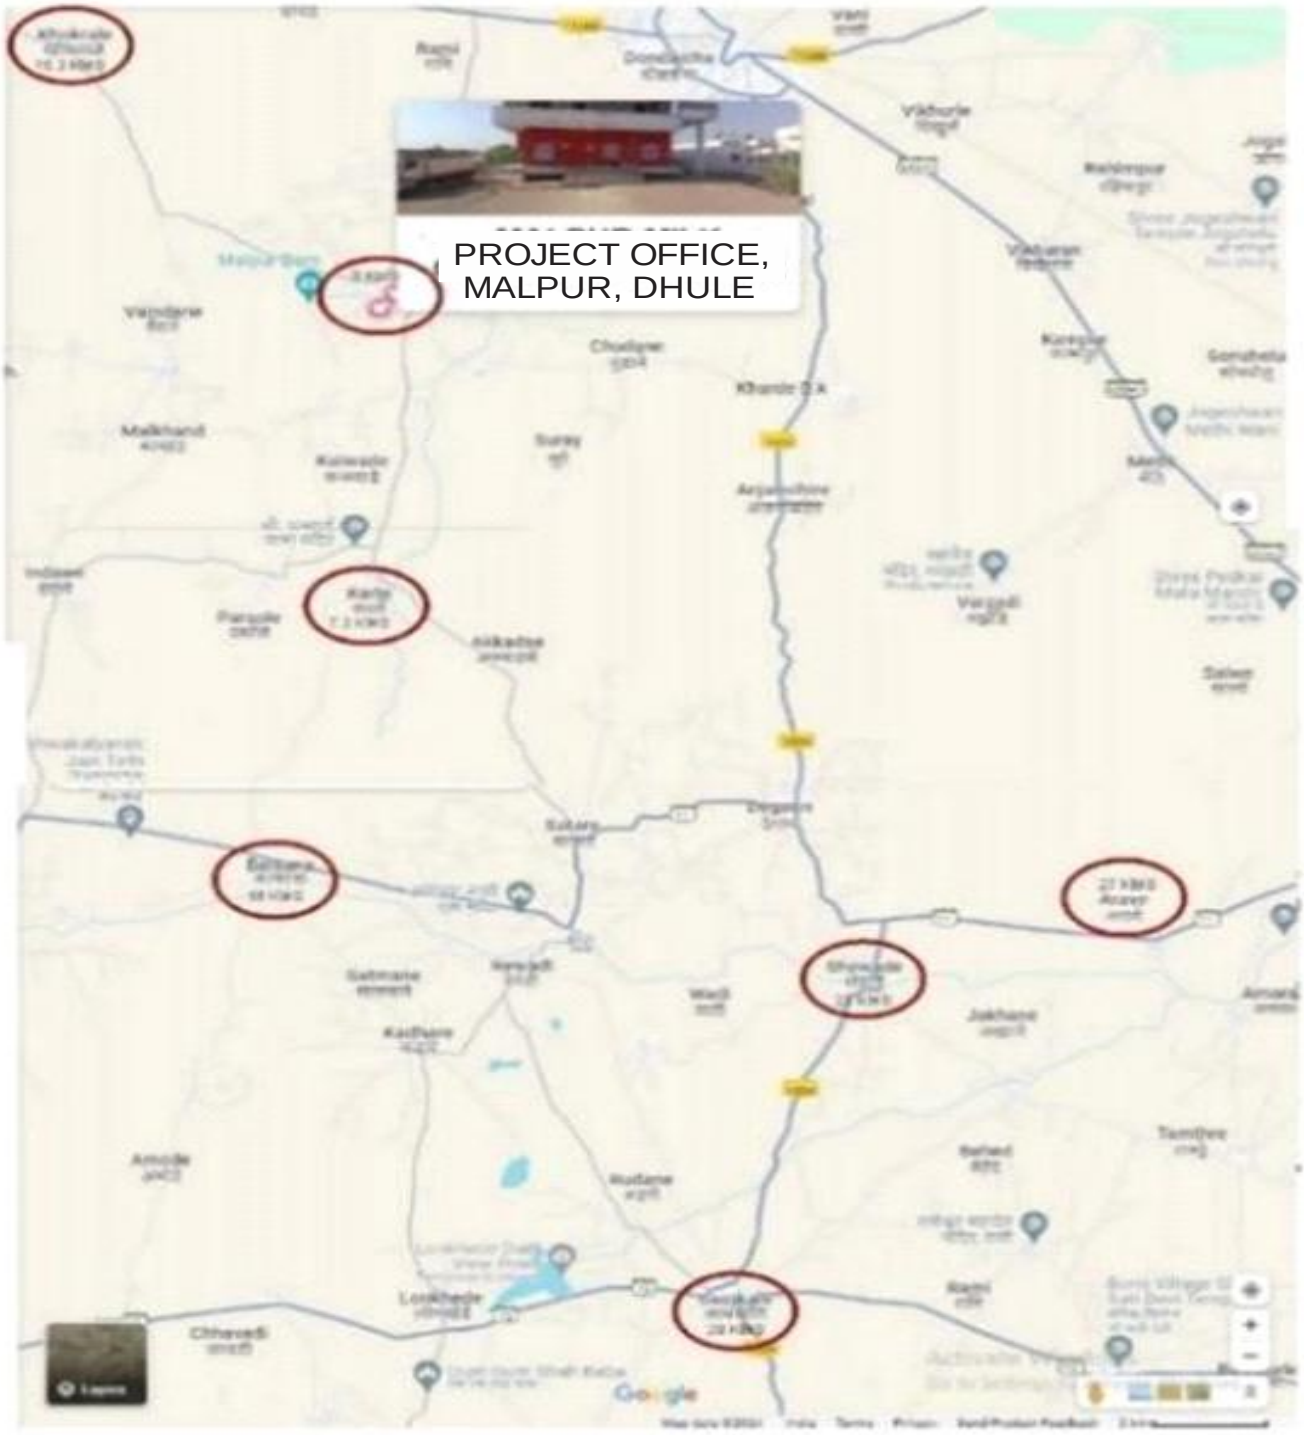

4. AFTER MONITORING AND MAINTAINING GOATS FOR THREE YEARS:

a. After observing three lactations in two consequent years, we will have idea of selection of goats and selection for genetic improvements. And will be ready for a good number of goats ready for all the genetical experiments and operations.
b. Having three years perfect Milking Data of the goats ahead we can have a choice of selection for Embryo Transfer as per the records.

After observing and planning in a proper way we aim at collection and preservation of a good quality of Goats, making it better and better through all the efforts of our company officers, staff, field workers, goat rearers, the scientists and doctors from our associate institutions and ultimately after three years bring the goats to a best situation of breeding genetically with a perfection.

With all these efforts we want to help uplifting the BPL or low-income society for a better life. By enhancing the quality quantity and consistency of milk throughout the year. The best quality of milk will prove to be competent in the open market and bring stability for the rearers in future.

V. 13 VILLAGES AROUND MALPUR, TARGETTED FOR BREED DEVELOPMENT AND HEALTH AWARENESS PROGRAM.
NINE VILLAGES IN DIS. DHULE AND FOUR VILLAGES IN DIS. NANDURBAR.

SUMMARY OF GOAT MILK COLLECTION

A visit to the Milk Collection Center.

Project Office at Village Malpur, Dhule Maharashtra.

Silage Machine.

.

Hon. V.C. Dr. Niteen Patil Milking goat On field at our project, Malpur, Dhule.

Dr. Ali with ready Silage.

Dr. Manoj Aware, BAIF, Pune, With our staff on field at Malpur, Dhule.
